Finding a specific value in Google Sheets can be done accurately by using the "Find and Replace" function. This function allows you to search for a specific value within a specific range of cells or the entire sheet. It also has options for case sensitivity and finding partial matches. Additionally, you can use the "Filter" function to narrow down your search and easily find the specific value you are looking for. By utilizing these tools, you can accurately locate a specific value in Google Sheets.

EXACT

Tests whether two strings are identical.

Sample Usage

```
EXACT(A1, A2)
```

```
EXACT("foo", A3)
```

Syntax

```
EXACT(string1, string2)
```

`string1` - The first string to compare

`string2` - The second string to compare

Notes

`EXACT` requires the two strings to have the exact same characters, including identical case and identical spaces or hidden characters.

Examples
