Google Sheets is a web-based spreadsheet program used for organizing and analyzing data. One of its useful features is the ability to adjust the number of columns within a sheet. This allows users to customize the layout and size of their data as needed. To adjust the number of columns in Google Sheets, simply select the desired location and click on the "Insert" tab, followed by "Columns." This will add a new column to the sheet, and users can continue to add or remove columns as needed. This feature provides users with flexibility and control over their data presentation in Google Sheets.

COLUMNS

Returns the number of columns in a specified array or range.

Sample Usage

```
COLUMNS ( A9 : W62 )
```

```
COLUMNS ( { 1 , 2 , 3 , 4 , 5 } )
```

Syntax

```
COLUMNS ( range )
```

`range` - The range whose column count will be returned

See Also

`ROWS`: Returns the number of rows in a specified array or range.

`ROW`: Returns the row number of a specified cell.

`COLUMN`: Returns the column number of a specified cell, with `A=1`.

Examples

Returns the number of columns in the given reference.
