## RECOMMENDED CITATION

stats writer (2024). ? How can I calculate the square root of a number in Google Sheets?.  
PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=161459>

The process of calculating the square root of a number in Google Sheets involves using the mathematical function "SQRT" followed by the desired number. This will provide the square root value of the number, which can be further manipulated or used in other calculations within the spreadsheet. This feature allows for efficient and accurate mathematical computations within Google Sheets.

## SQRT

Returns the positive square root of a positive number.

### Sample Usage

`SQRT(9)`

`SQRT(A2)`

### Syntax

`SQRT(value)`

`value` - The number for which to calculate the positive square root.

`value` must be positive; if it is negative, `SQRT` will return the `#NUM!` error.

### Notes

To find the negative root of `value`, simply multiply the result of the `SQRT` function call by `-1`.

### See Also

`SQRTPI`: Returns the positive square root of the product of Pi and the given positive number.

`POWER`: Returns a number raised to a power.

`LOG10`: Returns the logarithm of a number, base 10.

`LOG`: Returns the logarithm of a number given a base.

`LN`: Returns the logarithm of a number, base e (Euler's number).

`GAMMALN`: Returns the logarithm of a specified Gamma function, base e (Euler's number).

`EXP`: Returns Euler's number, e (~2.718) raised to a power.
