In order to change the column layout in Google Sheets, follow these simple steps:

1. Start by selecting the columns you wish to modify by clicking and dragging over their headers.
2. Next, right-click on one of the selected columns and choose "Resize columns" from the dropdown menu.
3. A pop-up window will appear, allowing you to adjust the column width by typing in a specific value or by clicking and dragging the column border.
4. Additionally, you can change the alignment of the column headers by clicking on the arrow next to "Align" in the pop-up window and selecting your desired alignment.
5. Once you are satisfied with the changes, click "OK" to apply them.

By following these steps, you can easily modify the column layout in Google Sheets to better suit your needs and preferences.

## COLUMN

Returns the column number of a specified cell, with `A=1`.

### Sample Usage

```
COLUMN(A9)
```

### Syntax

```
COLUMN( )
```

`cell_reference` - - The cell whose column number will be returned. Column `A` corresponds to `1`.

if `cell_reference` is a range more than one cell wide and the formula is not used as an array formula, the position of the first column in `cell_reference` is returned.

### See Also

`ROWS`: Returns the number of rows in a specified array or range.

`ROW`: Returns the row number of a specified cell.

`COLUMNS`: Returns the number of columns in a specified array or range.

### Examples

Returns the column number of a cell reference.
