RECOMMENDED CITATION

stats writer (2024). ? How can I check if a number is even in Google Sheets?.
PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=161063>

"The process of determining whether a number is even in Google Sheets involves using a specific formula or function to evaluate the number and return a result. This can be done by utilizing the 'ISODD' or 'ISEVEN' functions in Google Sheets, which allow users to easily check and verify the evenness of a given number. These functions can be applied to individual cells or entire columns, making it a quick and efficient way to identify even numbers within a spreadsheet. By following this method, users can accurately determine the evenness of numbers in Google Sheets and incorporate this data into their calculations or analysis."

ISEVEN

Checks whether the provided value is even.

Sample Usage

```
ISEVEN(4)
```

```
ISEVEN(A2)
```

Syntax

```
ISEVEN(value)
```

`value` - The value to be verified as even.

`ISEVEN` returns `TRUE` if `value` is an even integer or a reference to a cell containing an even integer, and `FALSE` otherwise.

Notes

This function is most often used in conjunction with `IF` in conditional statements.

See Also

`ISTEXT`: Checks whether a value is text.

`ISREF`: Checks whether a value is a valid cell reference.

`ISODD`: Checks whether the provided value is odd.

`ISNUMBER`: Checks whether a value is a number.

`ISNONTEXT`: Checks whether a value is non-textual.

ISNA: Checks whether a value is the error `#N/A`.

ISLOGICAL: Checks whether a value is `TRUE` or `FALSE`.

ISERROR: Checks whether a value is an error.

ISERR: Checks whether a value is an error other than `#N/A`.

ISBLANK: Checks whether the referenced cell is empty.

IF: Returns one value if a logical expression is `TRUE` and another if it is `FALSE`.
