Google Sheets is a powerful and versatile tool for managing and organizing data. However, over time, your sheets may become cluttered and difficult to navigate. To effectively clean up your Google Sheets, there are a few key steps you can take. First, it is important to review and delete any unnecessary or outdated data. Additionally, you can use filters and sorting options to organize your data and make it easier to find. You can also use formatting tools to highlight important information and make your sheets more visually appealing. Lastly, regularly backing up your sheets and creating a system for regular maintenance can help prevent clutter and keep your Google Sheets clean and organized. By following these steps, you can effectively clean up your Google Sheets and ensure they remain a useful and efficient tool for managing your data.

CLEAN

Returns the text with the non-printable ASCII characters removed.

Sample Usage

```
CLEAN("AF"&CHAR(31))
```

Syntax

```
CLEAN(text)
```

`text` - The text whose non-printable characters are to be removed.

Notes

This function only removes non-printable ASCII characters. Non-printable Unicode characters that aren't found in ASCII are not removed. Google Sheets does not show non-printable characters in the UI, so using this function will typically not result in any visible changes.

See Also

CHAR: Convert a number into a character according to the current Unicode table.

TRIM: Removes leading, trailing, and repeated spaces in text.

SUBSTITUTE: Replaces existing text with new text in a string.
