To create a chart in Google Sheets using data from multiple sheets, first open the Sheets document that contains the data you want to use. Then, click on the "Add Chart" button in the toolbar to open the chart editor. Select the type of chart you want to create, and then click on the "Data range" field in the chart editor. Here, you can manually type in the range of cells you want to include in the chart from the different sheets, separated by commas. Alternatively, you can click on the "Select data range" button and use your cursor to select the data from the different sheets. Once all the data is selected, click on "Insert" to add the chart to your Sheets document. This will create a chart that pulls data from multiple sheets, allowing you to easily visualize and analyze data from different sources.

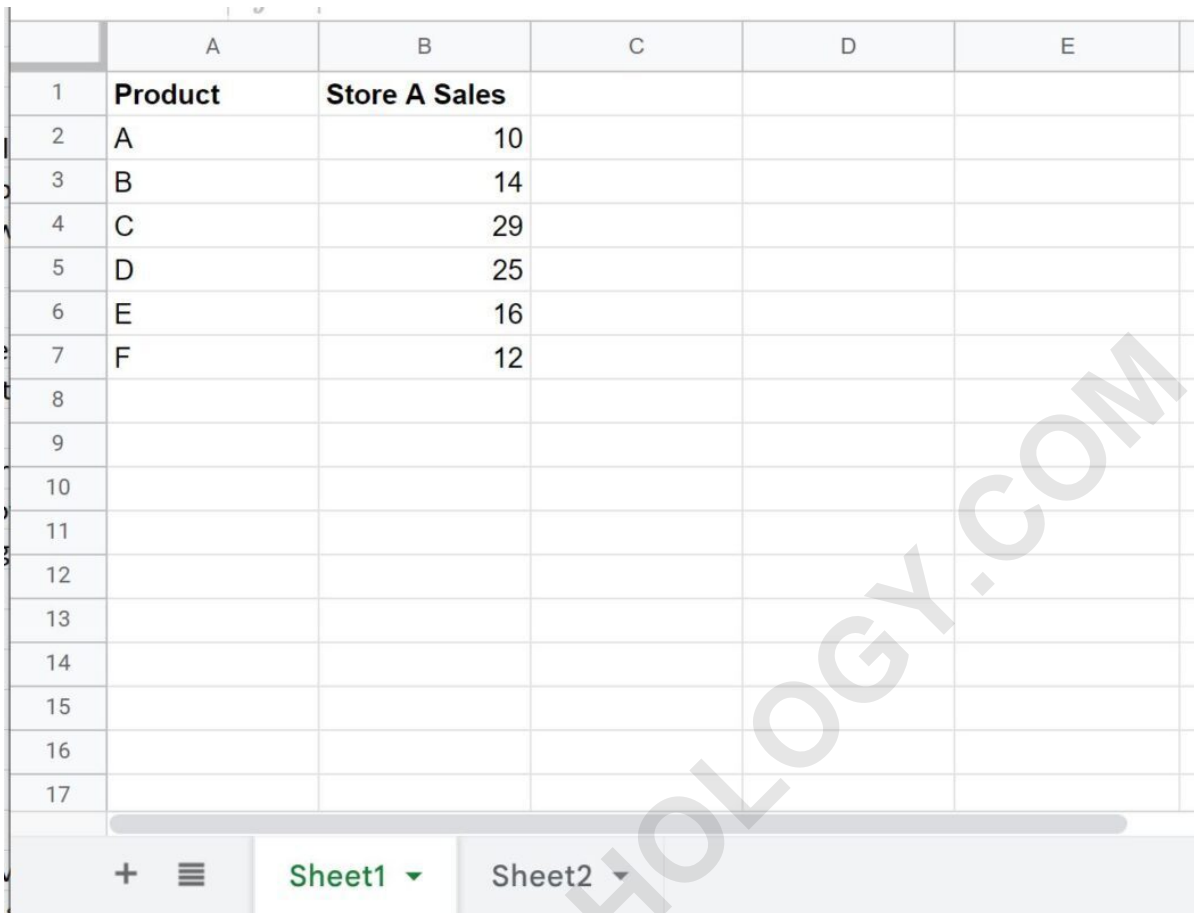

Google Sheets: Chart Data from Multiple Sheets

You can easily chart data from multiple sheets in Google Sheets by simply adding multiple ranges for Series in the Chart editor panel.

The following step-by-step example shows how to do so.

Step 1: Enter the Data

First, let's enter the following dataset into Sheet1 that shows the sales of various products at Store A:

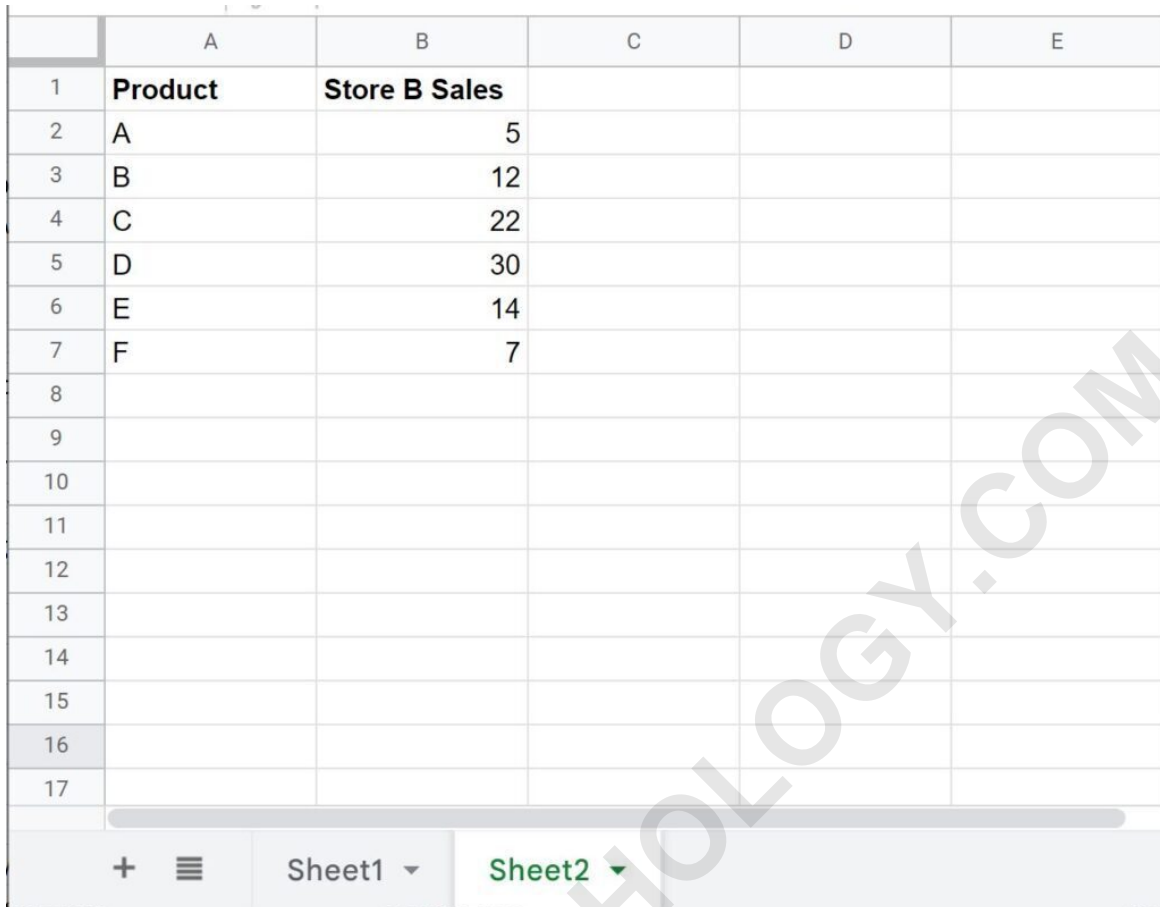

The screenshot shows a Google Sheet with two sheets, Sheet1 and Sheet2. Sheet1 is active and contains the following data:

	A	B	C	D	E
1	Product	Store A Sales			
2	A	10			
3	B	14			
4	C	29			
5	D	25			
6	E	16			
7	F	12			
8					
9					
10					
11					
12					
13					
14					
15					
16					
17					

The sheet tabs at the bottom show '+', a menu icon, 'Sheet1', and 'Sheet2'.

Next, we'll enter the following dataset into Sheet2 that shows the sales of the same products at Store B:

	A	B	C	D	E
1	Product	Store B Sales			
2	A	5			
3	B	12			
4	C	22			
5	D	30			
6	E	14			
7	F	7			
8					
9					
10					
11					
12					
13					
14					
15					
16					
17					

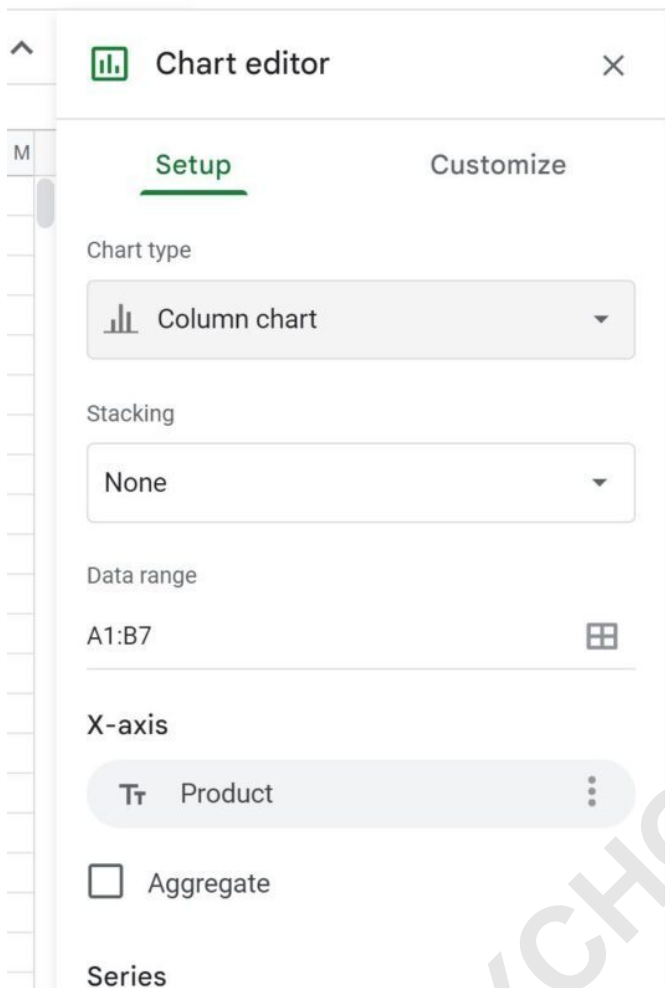

The screenshot shows a Google Sheets spreadsheet with columns A through E and rows 1 through 17. Column A contains product names (A-F) and column B contains sales values (5, 12, 22, 30, 14, 7). The sheet tabs at the bottom show 'Sheet1' and 'Sheet2'.

Step 2: Create Initial Chart

Next, we'll highlight the range A2:B7 in Sheet1, then click the Insert tab, then click Chart:

In the Chart editor panel that appears, we'll choose Column chart as the Chart type:

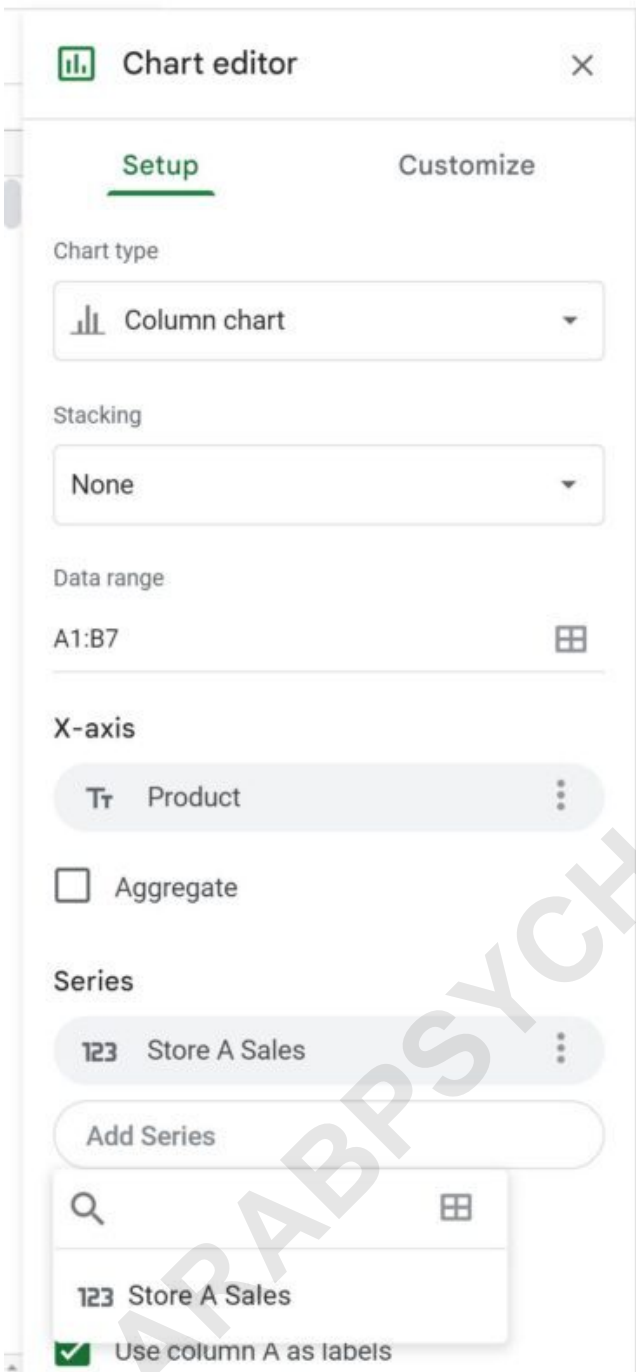

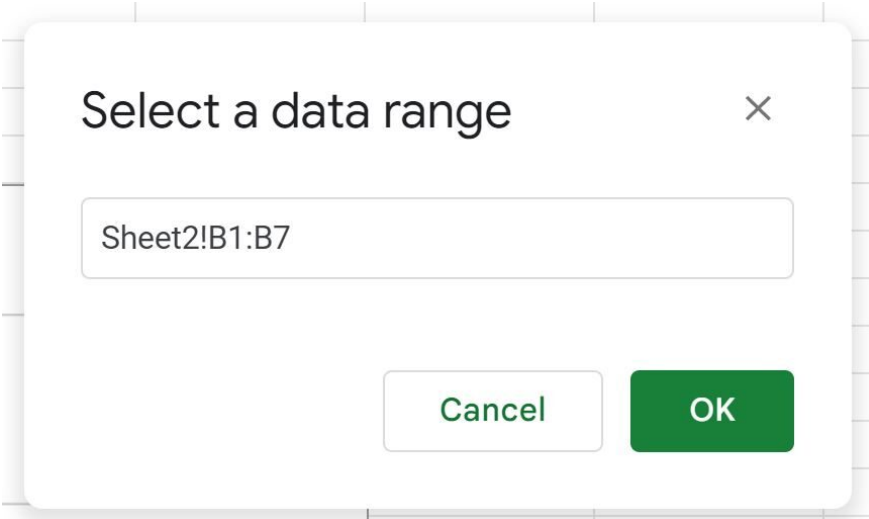

This will produce the following chart that shows the sales of each product from Sheet1:

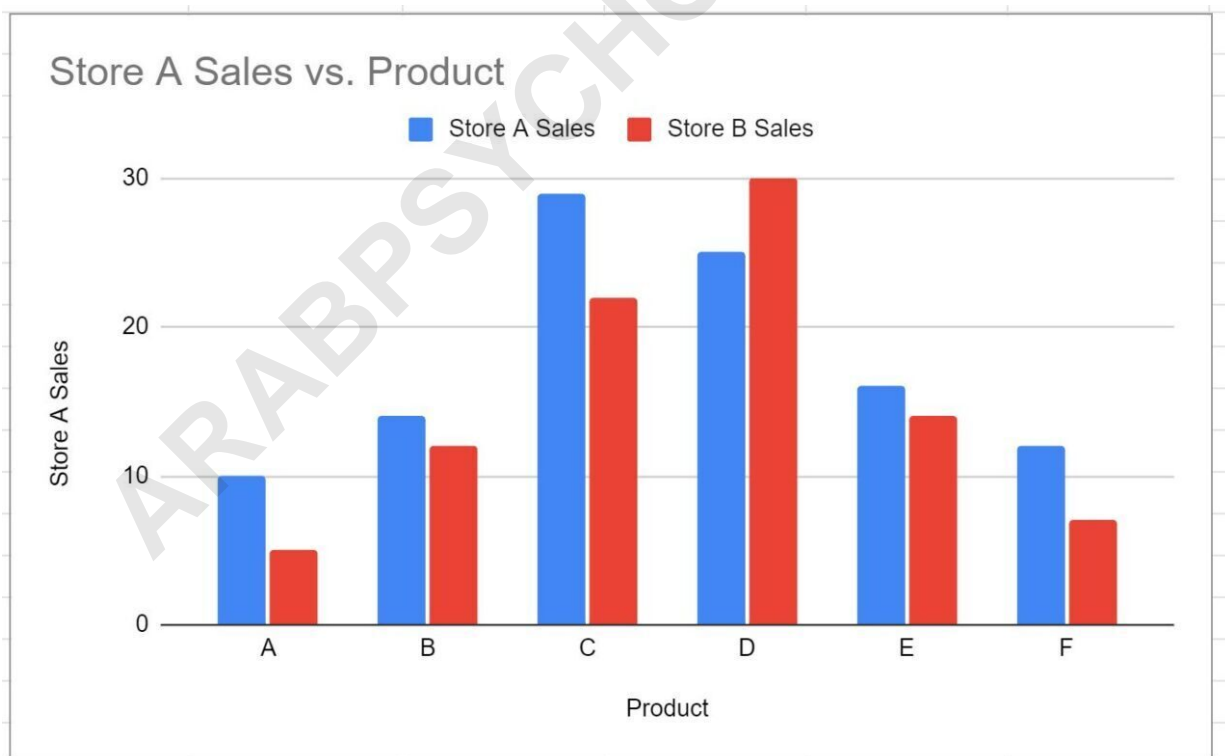

Step 3: Add Data from Second Sheet to Chart

To add the sales data from Sheet2 to the chart, click **Add Series** from the **Setup** tab within the **Chart editor** panel, then click the tiny grid icon:

Once you click OK, the sales data from Sheet2 will be added to the chart:

The blue bars represent the sales of each product from

Store A and the red bars represent the sales of each product from Store B.

Note #1: This example assumes that the data is arranged the same way in each sheet.

Note #2: In this example, we created a chart using data from two sheets. However, you can add as many ranges for Series in the Chart editor panel as you'd like to create a chart using even more sheets.

The following tutorials explain how to perform other common tasks in Google Sheets:
