## RECOMMENDED CITATION

stats writer (2024). *How can I create a function in excel that evaluates to FALSE?*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=159615>

Creating a function in excel that evaluates to FALSE can be achieved by using the logical function "FALSE". This function will return the logical value of FALSE, which can be used in various scenarios such as conditional formatting, data validation, and logical formulas. To create this function, simply type "=FALSE" into a cell or use it within a formula to evaluate any given condition to FALSE. This function can be useful in data analysis and decision-making processes within excel.

This article describes the formula syntax and usage of the **FALSE** function in Microsoft Excel.

## Description

Returns the logical value FALSE.

## Syntax

FALSE()

The FALSE function syntax has no arguments.

## Remark

You can also type the word FALSE directly onto the worksheet or into the formula, and Microsoft Excel interprets it as the logical value FALSE. The FALSE function is provided primarily for compatibility with other spreadsheet programs.
