PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=144447>

Creating a link to another tab in Google Sheets allows you to easily navigate between different sheets within the same spreadsheet. To create a link, simply right-click on the cell where you want to add the link and select "Insert link." Then, choose "Sheets in this spreadsheet" and select the tab you want to link to. This will create a clickable link that will take you directly to the desired tab. This feature is useful for organizing and accessing data in a more efficient manner.

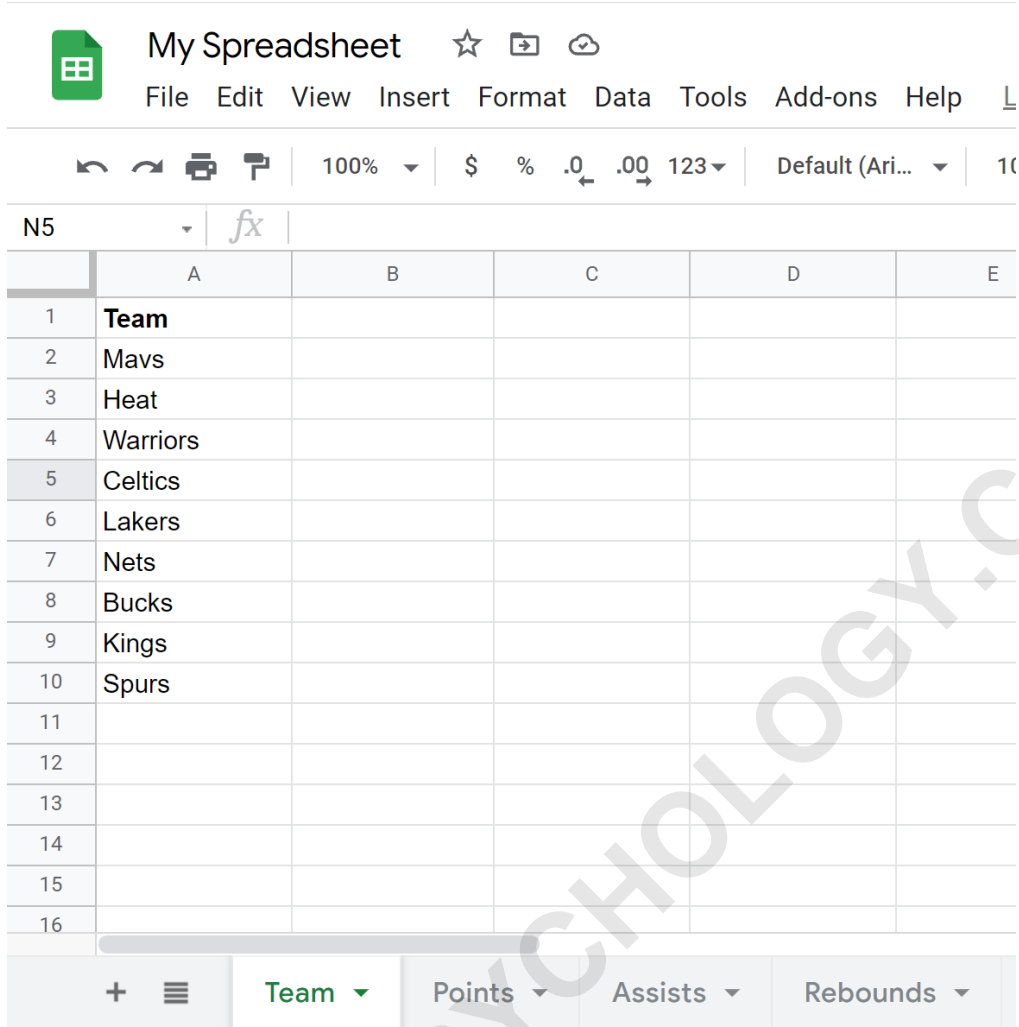

Link to Another Tab in Google Sheets (With Examples)

Often you may want to link from one tab in a Google Sheets spreadsheet to another tab in the same spreadsheet.

Fortunately this is easy to do using the HYPERLINK() function and the following example shows how to do so.

Example: Link to Another Tab in Google Sheets

Suppose we have the following spreadsheet that has four tabs containing various information about basketball teams:

The screenshot shows a Google Sheet interface. At the top, the title is "My Spreadsheet" with icons for star, share, and refresh. Below the title is a menu bar with "File", "Edit", "View", "Insert", "Format", "Data", "Tools", "Add-ons", and "Help". A toolbar below the menu contains icons for undo, redo, print, and a zoom level of 100%. The spreadsheet grid has columns labeled A through E and rows numbered 1 through 16. The "Team" column (A) contains the following text: Team, Mavs, Heat, Warriors, Celtics, Lakers, Nets, Bucks, Kings, Spurs. Below the grid is a tab bar with four tabs: "Team", "Points", "Assists", and "Rebounds".

To create a link to the Points tab, first click on the Points tab and then copy the URL at the top of your browser.

You'll notice that the URL of the Points tab will be different than the Team tab. For example, the URL of the Team tab ends with:

#gid=0

Conversely, the URL of the Points tab ends with:

#gid=788433911

We can then type in the following formula in cell B2 to create a link to the Points tab:

=HYPERLINK("https://docs.google.com/spreadsheets/d/1jTA/edit#gid=788433911","Points")

Once we do so, a hyperlink will appear in the spreadsheet:

	A	B	C	D	E
B1		<i>fx</i>	=HYPERLINK("https://docs.google.com/spreadsheets/d/1jTA/edit#gid=788433911","Points")		
1	Team	Points			
2	Mavs				
3	Heat				
4	Warriors				
5	Celtics				
6	Lakers				
7	Nets				
8	Bucks				
9	Kings				
10	Spurs				
11					
12					
13					
14					
15					
16					

When we click this hyperlink, it will automatically take us to the Points tab:

	A	B	C	D	E
1	Team	Points			
2	Mavs	99			
3	Heat	94			
4	Warriors	93			
5	Celtics	97			
6	Lakers	104			
7	Nets	109			
8	Bucks	99			
9	Kings	84			
10	Spurs	89			
11					
12					
13					
14					
15					
16					

Sheet navigation bar: + ☰ Team ▾ Points ▾ Assists ▾ Rebounds ▾

Note that we can use this same process to create a link to the Assists and Rebounds tabs as well.
