In Google Sheets, determining if a number is odd can be done by using the MOD function. This function returns the remainder when a number is divided by another number. If the remainder is equal to 1, then the number is odd. By using this function, users can easily and accurately determine if a number in Google Sheets is odd.

ISODD

Checks whether the provided value is odd.

Sample Usage

```
ISODD(4)
```

```
ISODD(A2)
```

Syntax

```
ISODD(value)
```

`value` - The value to be verified as odd.

ISODD returns **TRUE** if `value` is an odd integer or a reference to a cell containing an odd integer, and **FALSE** otherwise.

Notes

This function is most often used in conjunction with **IF** in conditional statements.

See Also

ISTEXT: Checks whether a value is text.

ISREF: Checks whether a value is a valid cell reference.

ISNUMBER: Checks whether a value is a number.

ISNONTEXT: Checks whether a value is non-textual.

ISNA: Checks whether a value is the error `#N/A`.

ISLOGICAL: Checks whether a value is `TRUE` or `FALSE`.

ISEVEN: Checks whether the provided value is even.

ISERROR: Checks whether a value is an error.

ISERR: Checks whether a value is an error other than `#N/A`.

ISBLANK: Checks whether the referenced cell is empty.

IF: Returns one value if a logical expression is `TRUE` and another if it is `FALSE`.
