There are several methods to remove borders from cells in VBA. One way is to use the ".Borders" property and specify which borders should be removed. Another method is to use the ".Clear" method to remove all borders from a specific range of cells. Additionally, the ".LineStyle" property can be used to change the border style to "xlNone" to remove all borders from a single cell. These methods provide flexibility in removing borders in VBA, allowing for customization according to specific needs.

VBA: Remove Borders from Cells

You can use the following basic syntax in VBA to remove borders from cells in a specific range:

```
Sub RemoveBorders()  
Range("A1:B12").Borders.LineStyle = xlNone  
End Sub
```

This particular example removes all borders from the cells in the range **A1:B12**.

The following example shows how to use this syntax in practice.

Example: Using VBA to Remove Borders from Cells

Suppose we have the following dataset in Excel that contains information about various basketball players:

	A	B	C	D	E	F
1	Team	Points				
2	Mavs	22				
3	Rockets	40				
4	Nets	23				
5	Spurs	29				
6	Hornets	34				
7	Magic	15				
8	Celtics	18				
9	Heat	18				
10	Kings	13				
11	Warriors	22				
12	Lakers	26				
13						
14						
15						
16						
17						
18						
19						
20						

Suppose we would like to remove the borders from each cell in the range **A1:B12**.

We can create the following macro to do so:

```
Sub RemoveBorders()  
Range("A1:B12").Borders.LineStyle = xlNone  
End Sub
```

When we run this macro, we receive the following output:

	A	B	C	D	E	F
1	Team	Points				
2	Mavs	22				
3	Rockets	40				
4	Nets	23				
5	Spurs	29				
6	Hornets	34				
7	Magic	15				
8	Celtics	18				
9	Heat	18				
10	Kings	13				
11	Warriors	22				
12	Lakers	26				
13						
14						
15						
16						
17						
18						
19						

Notice that the borders around each cell in the range **A1:B12** have been removed.

To remove the borders from cells in a different range, simply change **A1:B12** to a different range within the macro.

Note: You can find the complete documentation for the VBA **LineStyle** property .

The following tutorials explain how to perform other common tasks using VBA:
