To remove cell fill colors in VBA, you can use the "Interior" property of the cell and set its "ColorIndex" or "Pattern" to "xlNone". This will remove any existing fill color in the cell. Alternatively, you can also use the "ClearFormats" method to remove all formatting, including fill color, from the cell. Both methods can be used in a VBA code to remove cell fill colors efficiently.

## VBA: Remove Cell Fill Colors

You can use the following basic syntax in VBA to remove borders from cells in a specific range:

```
Sub RemoveFillColor()  
Range("A1:B12").Interior.Color = xlNone  
End Sub
```

This particular example removes all fill colors from the cells in the range A1:B12.

The following example shows how to use this syntax in practice.

**Example: Using VBA to Remove Cell Fill Colors**

Suppose we have the following dataset in Excel that contains information about various basketball players:

	A	B	C	D	E	F
1	<b>Team</b>	<b>Points</b>				
2	Mavs	22				
3	Rockets	40				
4	Nets	23				
5	Spurs	29				
6	Hornets	34				
7	Magic	15				
8	Celtics	18				
9	Heat	18				
10	Kings	13				
11	Warriors	22				
12	Lakers	26				
13						
14						
15						
16						
17						
18						

**Suppose we would like to remove the fill colors from each cell in the range A1:B12.**

**We can create the following macro to do so:**

```
Sub RemoveFillColor()  
Range("A1:B12").Interior.Color = xlNone  
End Sub
```

**When we run this macro, we receive the following output:**

	A	B	C	D	E	F
1	<b>Team</b>	<b>Points</b>				
2	Mavs	22				
3	Rockets	40				
4	Nets	23				
5	Spurs	29				
6	Hornets	34				
7	Magic	15				
8	Celtics	18				
9	Heat	18				
10	Kings	13				
11	Warriors	22				
12	Lakers	26				
13						
14						
15						
16						
17						
18						
19						

**Notice that the fill colors in each cell in the range A1:B12 have been removed.**

**To remove the fill colors from cells in a different range, simply change A1:B12 to a different range within the macro.**

**Note: You can find the complete documentation for the VBA Interior.Color property .**

**The following tutorials explain how to perform other**
