To repeat a specific action or formula multiple times in Google Sheets, you can use the fill handle feature. This allows you to easily copy and paste the action or formula across multiple cells. Simply click and drag the fill handle in the bottom right corner of the selected cell to the desired range. You can also use the "Fill Down" or "Fill Right" option under the Edit menu to quickly repeat the action or formula in a column or row. Additionally, you can use the CONCATENATE function to create a formula that repeats a specific action or formula based on a set of criteria. This allows for more customization and control over the repetition process.

REPT

Returns specified text repeated a number of times.

Sample Usage

```
REPT("ha",4)
```

```
REPT(A2,3)
```

Syntax

```
REPT(text_to_repeat, number_of_repetitions)
```

`text_to_repeat` - The character or string to repeat.

`number_of_repetitions` - The number of times `text_to_repeat` should appear in the value returned.

The `number_of_repetitions` can't exceed the character limit of a cell, 32,000 characters. If `number_of_repetitions` is greater than 32,000 characters, REPT will return a #VALUE! error.

Notes

REPT does not insert spaces between repetitions of `text_to_repeat`. If spaces are desired, a space must be appended to the end of the value of `text_to_repeat`. The resulting return value from REPT will have at least one trailing space, which may be removed with TRIM.

See Also

TRIM: Removes leading, trailing, and repeated spaces in text.

SUBSTITUTE: Replaces existing text with new text in a string.

SPLIT: Divides text around a specified character or string, and puts each fragment into a separate cell in the row.
