CONCATENATE is a function in Google Sheets that allows users to combine or merge data from different cells into one cell. In order to use CONCATENATE with a space in Google Sheets, users can simply include a space within quotation marks (" ") between the cell references or text strings they want to join together. This will result in a single cell containing the combined data with a space in between. This feature is useful for creating organized and visually appealing data sets in Google Sheets.

Google Sheets: Use CONCATENATE with a Space

You can use the following basic syntax to concatenate strings with a space in Google Sheets:

=CONCATENATE(A2," ",B2)

This particular formula will concatenate the strings in cells A2 and B2 with a space in between the strings.

The following example shows how to use this formula in practice.

Example: Concatenate Strings with Space in Google Sheets

Suppose we have the following dataset in Google Sheets that contains the city location and team name of various basketball teams:

	A	B	C	D
1	City	Name		
2	Atlanta	Hawks		
3	Boston	Celtics		
4	Charlotte	Hornets		
5	Cleveland	Cavaliers		
6	Dallas	Mavericks		
7	Detroit	Pistons		
8				
9				
10				
11				
12				
13				
14				
15				
16				
17				
18				
19				

If we use the following **CONCATENATE** function to concatenate the city and team names into one cell, no space will be added by default:

=CONCATENATE(A2,B2)

C2	▼	fx	=CONCATENATE(A2, B2)	
	A	B	C	D
1	City	Name	City & Team Name	
2	Atlanta	Hawks	AtlantaHawks	
3	Boston	Celtics	BostonCeltics	
4	Charlotte	Hornets	CharlotteHornets	
5	Cleveland	Cavaliers	ClevelandCavaliers	
6	Dallas	Mavericks	DallasMavericks	
7	Detroit	Pistons	DetroitPistons	
8				
9				
10				
11				
12				
13				
14				
15				
16				
17				

To concatenate with a space, we must explicitly use a space:

=CONCATENATE(A2, " ",B2)

C2		<i>fx</i>	=CONCATENATE(A2, " ", B2)		
	A	B	C	D	
1	City	Name	City & Team Name		
2	Atlanta	Hawks	Atlanta Hawks		
3	Boston	Celtics	Boston Celtics		
4	Charlotte	Hornets	Charlotte Hornets		
5	Cleveland	Cavaliers	Cleveland Cavaliers		
6	Dallas	Mavericks	Dallas Mavericks		
7	Detroit	Pistons	Detroit Pistons		
8					
9					
10					
11					
12					
13					
14					
15					
16					
17					
18					
19					

Notice that the city and team names have been concatenated with a space.

If we'd like, we can also add additional text to any location in the string.

For example, we can include "Team: " in the CONCATENATE function:

=CONCATENATE("Team: ", A2, " ", B2)

C2	fx	=CONCATENATE("Team: ", A2, " ", B2)		
	A	B	C	D
1	City	Name	City & Team Name	
2	Atlanta	Hawks	Team: Atlanta Hawks	
3	Boston	Celtics	Team: Boston Celtics	
4	Charlotte	Hornets	Team: Charlotte Hornets	
5	Cleveland	Cavaliers	Team: Cleveland Cavaliers	
6	Dallas	Mavericks	Team: Dallas Mavericks	
7	Detroit	Pistons	Team: Detroit Pistons	
8				
9				
10				
11				
12				
13				
14				
15				
16				
17				
18				
19				

Feel free to include as many strings and as many variables as you'd like in the CONCATENATE function, each separated by a comma.

The following tutorials explain how to perform other common tasks in Google Sheets:
