## RECOMMENDED CITATION

stats writer (2024). *How can I use Google Sheets to complete TYPE-?*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=159535>

Google Sheets is a versatile and user-friendly spreadsheet software that can be used to complete various tasks, including TYPE-. With its powerful features such as formula calculations, data sorting, and sharing capabilities, Google Sheets provides a convenient and efficient way to organize and analyze data. To complete TYPE-, users can create a new spreadsheet or use a pre-existing template, enter the relevant data, and utilize the different functions and tools available in Google Sheets to manipulate and present the information in a meaningful way. Additionally, Google Sheets allows for real-time collaboration, making it an ideal tool for group projects or data analysis. With its accessibility and functionality, Google Sheets is a valuable resource for any individual or organization seeking to complete TYPE-.

## TYPE

Returns a number associated with the type of data passed into the function.

### Sample Usage

```
TYPE(C4)
```

```
TYPE({1;2;3;4;5})
```

### Syntax

```
TYPE(value)
```

`value` - The data whose type is to be determined.

### Notes

This function returns the following numbers:

1: if `value` is a number  
2: if `value` is text  
4: if `value` is boolean  
16: if `value` is an error  
64: if `value` is an array  
128: for any other type of cell. For example, in-cell images and sparklines.  
The function cannot determine whether or not a cell or range of cells is using a formula, only returning the type of value being displayed in the cells.

### See Also

**ISTEXT:** Checks whether a value is text.

**ISNUMBER:** Checks whether a value is a number.

**ISLOGICAL:** Checks whether a value is `TRUE` or `FALSE`.

ISERROR: Checks whether a value is an error.
