## RECOMMENDED CITATION

stats writer (2024). . *How can I use the ADD function in Google Sheets?*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=161649>

The ADD function in Google Sheets is a built-in mathematical formula that allows users to easily add numbers or cells together within a spreadsheet. This function simplifies the process of adding large amounts of data and ensures accurate calculations. To use the ADD function, simply input the desired numbers or cells separated by commas within the function's parentheses. This feature is extremely useful for budgeting, data analysis, and other numerical tasks. By utilizing the ADD function, users can save time and effort while maintaining the integrity of their data.

## ADD

Returns the sum of two numbers. Equivalent to the '+' operator.

### Sample Usage

```
ADD(A2, A3)
```

```
ADD(3, 4)
```

### Syntax

```
ADD(value1, value2)
```

`value1` - The first addend.

`value2` - The second addend.

### Notes

Unlike `SUM`, `ADD` only supports the addition of two scalar values and takes neither ranges nor more than two arguments.

### See Also

`SUM`: Returns the sum of a series of numbers and/or cells.

`QUOTIENT`: Returns one number divided by another, without the remainder.

`PRODUCT`: Returns the result of multiplying a series of numbers together.

`MULTIPLY`: Returns the product of two numbers. Equivalent to the '\*' operator.

`MINUS`: Returns the difference of two numbers. Equivalent to the '-' operator.

**DIVIDE**: Returns one number divided by another. Equivalent to the `/` operator.
