The ASC function in Google Sheets is a powerful tool that allows users to sort data in ascending order based on a specified column or range. This function is useful for organizing and analyzing data in a more efficient and organized manner. To use the ASC function, simply select the data you wish to sort, enter the function in an empty cell, and specify the column or range you want to sort by. This will rearrange the data in ascending order, making it easier to identify patterns and trends. The ASC function is a valuable feature in Google Sheets that can greatly enhance data management and analysis capabilities.

ASC function

The ASC function converts full-width ASCII and Katakana characters to their half-width counterparts. All standard-width characters remain unchanged by the ASC function.

Parts of a ASC function

`=ASC (text)`

Part	Description
<code>text</code>	The text to convert to half-width characters.

Sample formula

`ASC ("?????")`

Example

	A	B
1	Formula	Result
2	<code>=ASC ("?????")</code>	???????
