The GESTEP function in Google Sheets is a useful tool for determining whether a given number is greater than or equal to a certain threshold. This function takes two inputs - the number to be evaluated and the threshold value - and returns a 1 if the number is greater than or equal to the threshold, and a 0 if it is not. This allows users to quickly and easily identify numbers that meet a specific criteria, such as being above a certain threshold. By utilizing the GESTEP function, users can efficiently sort and analyze data in their Google Sheets spreadsheet.

## GESTEP function

The GESTEP function returns 1 if the rate is strictly greater than or equal to the provided step value, or 0 otherwise. If no step value is provided, then the default value of 0 is used.

### Parts of a GESTEP function

`GESTEP(value, )`

Part	Description	Notes
value	The value to test against the step number.	
step	The value to be tested against. It's 0 if the argument is left blank.	

### Sample formulas

`GESTEP(5, 2)`

`GESTEP(2)`

`GESTEP(-0.00001)`

`GESTEP(-6, -1)`

### Notes

If either `value` or `step` is non-numeric, GESTEP returns `#VALUE!`

### Examples

	A	B
1	Formula	Result
2	<code>GESTEP(5, 2)</code>	1
3	<code>GESTEP(2)</code>	1

4	<code>GESTEP(-0.00001)</code>	0
5	<code>GESTEP(-6, -1)</code>	0

## Related function

DELTA: Compare two numeric values, returning 1 if they're equal.
