## RECOMMENDED CITATION

stats writer (2024). *How can I use the GTE function in Google Sheets?*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=161743>

The GTE function in Google Sheets is a built-in function that allows users to compare two values and determine if the first value is greater than or equal to the second value. This function can be useful in various scenarios, such as financial analysis, data sorting, and conditional formatting. To use the GTE function, simply enter the function syntax in a cell and specify the two values to be compared. The function will return a TRUE or FALSE value, indicating the result of the comparison. This function is a powerful tool for data analysis and can be easily incorporated into formulas and functions within Google Sheets.

## GTE

Returns `TRUE` if the first argument is greater than or equal to the second, and `FALSE` otherwise. Equivalent to the `>=` operator.

### Sample Usage

```
GTE(A2, A3)
```

```
GTE(2, 3)
```

### Syntax

```
GTE(value1, value2)
```

`value1` - The value to test as being greater than or equal to `value2`.

`value2` - The second value.

### See Also

**NE**: Returns "TRUE" if two specified values are not equal and "FALSE" otherwise. Equivalent to the "<>" operator.

**LTE**: Returns `TRUE` if the first argument is less than or equal to the second, and `FALSE` otherwise. Equivalent to the `<=` operator.

**LT**: Returns `TRUE` if the first argument is strictly less than the second, and `FALSE` otherwise. Equivalent to the `<` operator.

**GT**: Returns `TRUE` if the first argument is strictly greater than the second, and `FALSE` otherwise. Equivalent to the `>` operator.

**EQ**: Returns "TRUE" if two specified values are equal and "FALSE" otherwise. Equivalent to the "="

operator.
