Autofilling in Google Sheets allows users to quickly and efficiently transfer data from one sheet to another. This feature eliminates the need to manually copy and paste data, saving time and reducing the risk of errors. To autofill values from one sheet to another in Google Sheets, users can simply select the desired cells, click and hold the bottom right corner of the selection, and drag it across the cells where they want the data to be filled. This will automatically populate the selected cells with the corresponding data from the original sheet. Additionally, users can use the "Fill Down" or "Fill Right" options to quickly autofill data in a column or row. This feature is particularly useful for transferring data between multiple sheets or for creating consistent data sets.

## Google Sheets: Autofill Values from Another Sheet

**The following step-by-step example shows how to autofill values from another sheet in Google Sheets.**

### Step 1: Enter Data in First Sheet

**First, let's enter the following data into Sheet1 in Google Sheets:**

	A	B	C	D
1	<b>Team</b>	<b>Points</b>		
2	Rockets	99		
3	Warriors	93		
4	Kings	90		
5	Nets	104		
6	Hawks	115		
7	Heat	103		
8	Magic	109		
9	Thunder	94		
10	Grizzlies	95		
11	Knicks	90		
12	Nuggets	88		
13	Jazz	101		
14				
15				
16				

Sheet1 Sheet2

## Step 2: Autofill Data in Second Sheet

Now suppose we have another sheet titled **Sheet2** that contains the following data:

	A	B	C	D
1	<b>Team</b>	<b>Conference</b>		
2	Rockets	Western		
3	Warriors	Western		
4	Kings	Western		
5	Nets	Eastern		
6	Hawks	Eastern		
7	Heat	Eastern		
8	Magic	Eastern		
9	Thunder	Western		
10	Grizzlies	Western		
11	Knicks	Eastern		
12	Nuggets	Western		
13	Jazz	Western		
14				
15				
16				

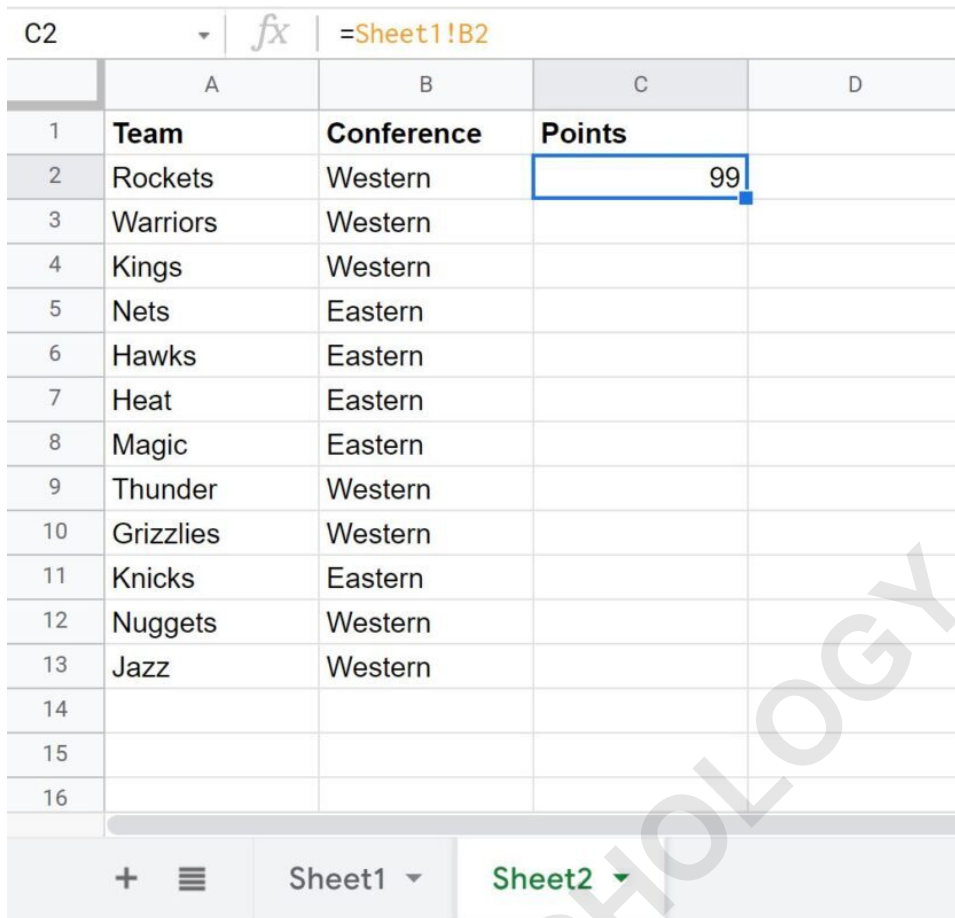

Sheet1 Sheet2

**Suppose we would like to autofill the values from the Points column in Sheet1 into a Points column in Sheet2.**

**To do so, we can type the following formula in cell C2 of Sheet2:**

**=Sheet1!B2**

**This will automatically populate cell C2 in Sheet2 with the value from cell B2 in Sheet1:**

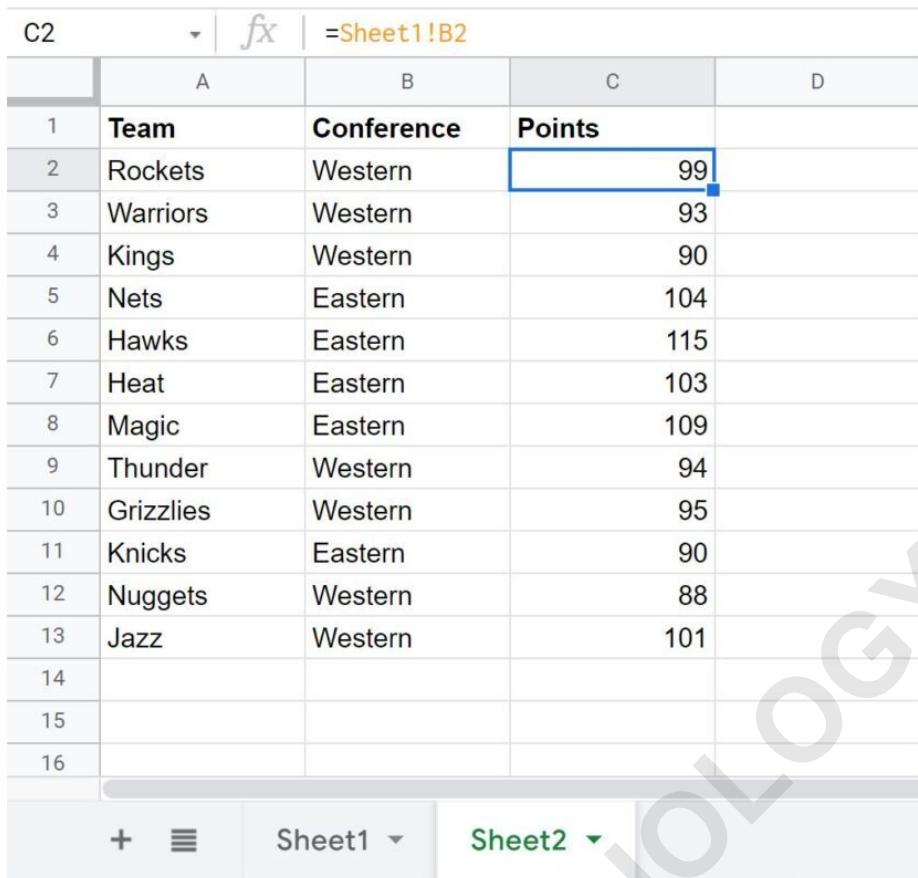

The screenshot shows a Google Sheets interface. The active cell is C2, and the formula bar displays '=Sheet1!B2'. The table below has the following data:

	A	B	C	D
1	<b>Team</b>	<b>Conference</b>	<b>Points</b>	
2	Rockets	Western	99	
3	Warriors	Western		
4	Kings	Western		
5	Nets	Eastern		
6	Hawks	Eastern		
7	Heat	Eastern		
8	Magic	Eastern		
9	Thunder	Western		
10	Grizzlies	Western		
11	Knicks	Eastern		
12	Nuggets	Western		
13	Jazz	Western		
14				
15				
16				

The bottom of the sheet shows two tabs: 'Sheet1' and 'Sheet2'.

To autofill the rest of the values in column C, we can hover over the bottom right-hand corner of cell C2 until a tiny "+" appears.

Then click and drag down to all of the remaining cells in column C:

C2    fx    =Sheet1!B2

	A	B	C	D
1	<b>Team</b>	<b>Conference</b>	<b>Points</b>	
2	Rockets	Western	99	
3	Warriors	Western	93	
4	Kings	Western	90	
5	Nets	Eastern	104	
6	Hawks	Eastern	115	
7	Heat	Eastern	103	
8	Magic	Eastern	109	
9	Thunder	Western	94	
10	Grizzlies	Western	95	
11	Knicks	Eastern	90	
12	Nuggets	Western	88	
13	Jazz	Western	101	
14				
15				
16				

Sheet1    Sheet2

**Notice that all of the values from the Points column in Sheet1 have been autofilled into Sheet2.**
