## RECOMMENDED CITATION

stats writer (2024). *How do I calculate standardized residuals in Excel?*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=138533>

The process of calculating standardized residuals in Excel involves taking the difference between the observed data values and the predicted values, and then dividing it by the standard deviation of the residuals. This results in a standardized measure of the difference between the actual data and the predicted values. To do this in Excel, you will need to use the appropriate formulas and functions, such as the "STDEV.S" function and the "RESID" function. By following these steps, you can easily calculate and interpret standardized residuals to assess the accuracy of your predicted values.

## Calculate Standardized Residuals in Excel

**A residual is the difference between an observed value and a predicted value in a regression model.**

**It is calculated as:**

**Residual = Observed value - Predicted value**

**If we plot the observed values and overlay the fitted regression line, the residuals for each would be the vertical distance between the observation and the regression line:**

One type of residual we often use to identify outliers in a regression model is known as a standardized residual.

It is calculated as:

$$r_i = e_i / s(e_i) = e_i / RSE \sqrt{1 - h_{ii}}$$

where:

$e_i$ : The  $i$ th residual  
 $RSE$ : The residual standard error of the model  
 $h_{ii}$ : The leverage of the  $i$ th observation

In practice, we often consider any standardized residual

with an absolute value greater than 3 to be an outlier.

This tutorial provides a step-by-step example of how to calculate standardized residuals in Excel.

### Step 1: Enter the Data

First, we'll enter the values for a small dataset into Excel:

|    | A | B  | C  | D | E | F | G |
|----|---|----|----|---|---|---|---|
| 1  |   | X  | Y  |   |   |   |   |
| 2  |   | 8  | 41 |   |   |   |   |
| 3  |   | 12 | 42 |   |   |   |   |
| 4  |   | 12 | 39 |   |   |   |   |
| 5  |   | 13 | 37 |   |   |   |   |
| 6  |   | 14 | 35 |   |   |   |   |
| 7  |   | 16 | 39 |   |   |   |   |
| 8  |   | 17 | 45 |   |   |   |   |
| 9  |   | 22 | 46 |   |   |   |   |
| 10 |   | 24 | 39 |   |   |   |   |
| 11 |   | 26 | 49 |   |   |   |   |
| 12 |   | 29 | 55 |   |   |   |   |
| 13 |   | 30 | 57 |   |   |   |   |
| 14 |   |    |    |   |   |   |   |
| 15 |   |    |    |   |   |   |   |
| 16 |   |    |    |   |   |   |   |
| 17 |   |    |    |   |   |   |   |
| 18 |   |    |    |   |   |   |   |
| 19 |   |    |    |   |   |   |   |
| 20 |   |    |    |   |   |   |   |
| 21 |   |    |    |   |   |   |   |
| 22 |   |    |    |   |   |   |   |
| 23 |   |    |    |   |   |   |   |
| 24 |   |    |    |   |   |   |   |

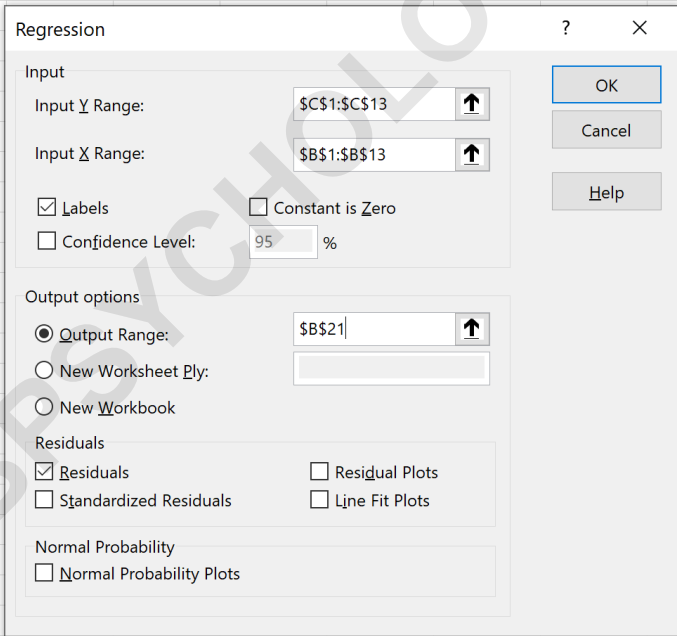

### Step 2: Calculate the Residuals

Next, we'll go to the Data tab along the top ribbon and click Data Analysis within the Analysis group:

*If you haven't installed this Add-in already, check out on how to do so. It's easy to install and completely free.*

Once you've clicked Data Analysis, click the option that says Regression and then click OK. In the new window that pops up, fill in the following information and click OK:

|    | A | B  | C  | D | E | F | G | H | I | J |
|----|---|----|----|---|---|---|---|---|---|---|
| 1  |   | X  | Y  |   |   |   |   |   |   |   |
| 2  |   | 8  | 41 |   |   |   |   |   |   |   |
| 3  |   | 12 | 42 |   |   |   |   |   |   |   |
| 4  |   | 12 | 39 |   |   |   |   |   |   |   |
| 5  |   | 13 | 37 |   |   |   |   |   |   |   |
| 6  |   | 14 | 35 |   |   |   |   |   |   |   |
| 7  |   | 16 | 39 |   |   |   |   |   |   |   |
| 8  |   | 17 | 45 |   |   |   |   |   |   |   |
| 9  |   | 22 | 46 |   |   |   |   |   |   |   |
| 10 |   | 24 | 39 |   |   |   |   |   |   |   |
| 11 |   | 26 | 49 |   |   |   |   |   |   |   |
| 12 |   | 29 | 55 |   |   |   |   |   |   |   |
| 13 |   | 30 | 57 |   |   |   |   |   |   |   |
| 14 |   |    |    |   |   |   |   |   |   |   |
| 15 |   |    |    |   |   |   |   |   |   |   |
| 16 |   |    |    |   |   |   |   |   |   |   |
| 17 |   |    |    |   |   |   |   |   |   |   |
| 18 |   |    |    |   |   |   |   |   |   |   |
| 19 |   |    |    |   |   |   |   |   |   |   |
| 20 |   |    |    |   |   |   |   |   |   |   |
| 21 |   |    |    |   |   |   |   |   |   |   |
| 22 |   |    |    |   |   |   |   |   |   |   |
| 23 |   |    |    |   |   |   |   |   |   |   |
| 24 |   |    |    |   |   |   |   |   |   |   |
| 25 |   |    |    |   |   |   |   |   |   |   |
| 26 |   |    |    |   |   |   |   |   |   |   |
| 27 |   |    |    |   |   |   |   |   |   |   |
| 28 |   |    |    |   |   |   |   |   |   |   |

The residual for each observation will appear in the output:

|    |  |                    |                    |                  |
|----|--|--------------------|--------------------|------------------|
| 40 |  |                    |                    |                  |
| 41 |  |                    |                    |                  |
| 42 |  | RESIDUAL OUTPUT    |                    |                  |
| 43 |  |                    |                    |                  |
| 44 |  | <i>Observation</i> | <i>Predicted Y</i> | <i>Residuals</i> |
| 45 |  | 1                  | 35.6732            | 5.326796         |
| 46 |  | 2                  | 38.69435           | 3.305645         |
| 47 |  | 3                  | 38.69435           | 0.305645         |
| 48 |  | 4                  | 39.44964           | -2.44964         |
| 49 |  | 5                  | 40.20493           | -5.20493         |
| 50 |  | 6                  | 41.71551           | -2.71551         |
| 51 |  | 7                  | 42.47079           | 2.529206         |
| 52 |  | 8                  | 46.24723           | -0.24723         |
| 53 |  | 9                  | 47.75781           | -8.75781         |
| 54 |  | 10                 | 49.26838           | -0.26838         |
| 55 |  | 11                 | 51.53425           | 3.465752         |
| 56 |  | 12                 | 52.28954           | 4.710464         |
| 57 |  |                    |                    |                  |
| 58 |  |                    |                    |                  |
| 59 |  |                    |                    |                  |
| 60 |  |                    |                    |                  |
| 61 |  |                    |                    |                  |
| 62 |  |                    |                    |                  |

**Copy and paste these residuals in a new column next to the original data:**

|    | A | B        | C        | D                | E |
|----|---|----------|----------|------------------|---|
| 1  |   | <b>X</b> | <b>Y</b> | <b>Residuals</b> |   |
| 2  |   | 8        | 41       | 5.326796         |   |
| 3  |   | 12       | 42       | 3.305645         |   |
| 4  |   | 12       | 39       | 0.305645         |   |
| 5  |   | 13       | 37       | -2.44964         |   |
| 6  |   | 14       | 35       | -5.20493         |   |
| 7  |   | 16       | 39       | -2.71551         |   |
| 8  |   | 17       | 45       | 2.529206         |   |
| 9  |   | 22       | 46       | -0.24723         |   |
| 10 |   | 24       | 39       | -8.75781         |   |
| 11 |   | 26       | 49       | -0.26838         |   |
| 12 |   | 29       | 55       | 3.465752         |   |
| 13 |   | 30       | 57       | 4.710464         |   |
| 14 |   |          |          |                  |   |
| 15 |   |          |          |                  |   |
| 16 |   |          |          |                  |   |
| 17 |   |          |          |                  |   |
| 18 |   |          |          |                  |   |
| 19 |   |          |          |                  |   |
| 20 |   |          |          |                  |   |

### Step 3: Calculate the Leverage

Next, we need to calculate the leverage of each observation.

The following image shows how to do so:

|    | A           | B        | C        | D                | E               | F |
|----|-------------|----------|----------|------------------|-----------------|---|
| 1  |             | <b>X</b> | <b>Y</b> | <b>Residuals</b> | <b>Leverage</b> |   |
| 2  |             | 8        | 41       | 5.326796         | 0.271607        |   |
| 3  |             | 12       | 42       | 3.305645         | 0.156184        |   |
| 4  |             | 12       | 39       | 0.305645         | 0.156184        |   |
| 5  |             | 13       | 37       | -2.44964         | 0.135733        |   |
| 6  |             | 14       | 35       | -5.20493         | 0.118644        |   |
| 7  |             | 16       | 39       | -2.71551         | 0.094551        |   |
| 8  |             | 17       | 45       | 2.529206         | 0.087547        |   |
| 9  |             | 22       | 46       | -0.24723         | 0.102956        |   |
| 10 |             | 24       | 39       | -8.75781         | 0.132652        |   |
| 11 |             | 26       | 49       | -0.26838         | 0.175795        |   |
| 12 |             | 29       | 55       | 3.465752         | 0.265723        |   |
| 13 |             | 30       | 57       | 4.710464         | 0.302423        |   |
| 14 | <b>n</b>    | 12       |          |                  |                 |   |
| 15 | <b>Mean</b> | 18.583   |          |                  |                 |   |
| 16 | <b>SS</b>   | 594.917  |          |                  |                 |   |
| 17 |             |          |          |                  |                 |   |
| 18 |             |          |          |                  |                 |   |
| 19 |             |          |          |                  |                 |   |
| 20 |             |          |          |                  |                 |   |

Here are the formulas used in the various cells:

**B14:** =COUNT(B2:B13)  
**B15:** =AVERAGE(B2:B13)  
**B16:** =DEVSQ(B2:B13) **E2:** =1/\$B\$14+(B2-\$B\$15)^2/\$B\$16

Step 4: Calculate the Standardized Residuals

Lastly, we can calculate the standardized residuals using the formula:

$$r_i = e_i / RSE \sqrt{1-h_{ii}}$$

The RSE for the model can be found in the model output from earlier. It turns out to be 4.44:

|    |             |                              |                     |           |                       |               |                |
|----|-------------|------------------------------|---------------------|-----------|-----------------------|---------------|----------------|
| 13 |             | 30                           | 57                  | 4.710464  | 0.302423              |               |                |
| 14 | <b>n</b>    | 12                           |                     |           |                       |               |                |
| 15 | <b>Mean</b> | 18.583                       |                     |           |                       |               |                |
| 16 | <b>SS</b>   | 594.917                      |                     |           |                       |               |                |
| 17 |             |                              |                     |           |                       |               |                |
| 18 |             |                              |                     |           |                       |               |                |
| 19 |             |                              |                     |           |                       |               |                |
| 20 |             |                              |                     |           |                       |               |                |

| 32 |             | Regression                   | 1                   | 339.376   | 339.376               | 17.2018       |                |
| 33 |             | Residual                     | 10                  | 197.2907  | 19.72907              |               |                |
| 34 |             | Total                        | 11                  | 536.6667  |                       |               |                |
| 35 |             |                              |                     |           |                       |               |                |
| 36 |             |                              | <i>Coefficients</i> |           | <i>Standard Error</i> | <i>t Stat</i> | <i>P-value</i> |
| 37 |             | Intercept                    | 29.6309             | 3.618911  | 8.187794              | 9.6038        |                |
| 38 |             | X                            | 0.755288            | 0.182106  | 4.147509              | 0.00198       |                |
| 39 |             |                              |                     |           |                       |               |                |

Thus, we can use the following formula to calculate the standardized residual for each observation:

|    | A    | B  | C       | D         | E        | F                      |
|----|------|----|---------|-----------|----------|------------------------|
| 1  |      | X  | Y       | Residuals | Leverage | Standardized Residuals |
| 2  |      | 8  | 41      | 5.326796  | 0.271607 | =D2/(4.44*SQRT(1-E2))  |
| 3  |      | 12 | 42      | 3.305645  | 0.156184 | 0.810                  |
| 4  |      | 12 | 39      | 0.305645  | 0.156184 | 0.075                  |
| 5  |      | 13 | 37      | -2.44964  | 0.135733 | -0.593                 |
| 6  |      | 14 | 35      | -5.20493  | 0.118644 | -1.249                 |
| 7  |      | 16 | 39      | -2.71551  | 0.094551 | -0.643                 |
| 8  |      | 17 | 45      | 2.529206  | 0.087547 | 0.596                  |
| 9  |      | 22 | 46      | -0.24723  | 0.102956 | -0.059                 |
| 10 |      | 24 | 39      | -8.75781  | 0.132652 | -2.118                 |
| 11 |      | 26 | 49      | -0.26838  | 0.175795 | -0.067                 |
| 12 |      | 29 | 55      | 3.465752  | 0.265723 | 0.911                  |
| 13 |      | 30 | 57      | 4.710464  | 0.302423 | 1.270                  |
| 14 | n    |    | 12      |           |          |                        |
| 15 | Mean |    | 18.583  |           |          |                        |
| 16 | SS   |    | 594.917 |           |          |                        |
| 17 |      |    |         |           |          |                        |
| 18 |      |    |         |           |          |                        |
| 19 |      |    |         |           |          |                        |
| 20 |      |    |         |           |          |                        |

From the results we can see that none of the standardized residuals exceed an absolute value of 3. Thus, none of the observations appear to be outliers.

It's worth noting in some cases that researchers consider observations with standardized residuals that exceed an absolute value of 2 to be considered outliers.

It's up to you to decide whether to use an absolute value of 2 or 3 as the threshold for outliers, depending on the specific problem you're working on.

## What Are Standardized Residuals?
