To convert degrees to radians in Google Sheets, you can use the RADIANS function. This function takes in a value in degrees and returns the equivalent value in radians. To use this function, simply enter "=RADIANS(value)" in a cell, replacing "value" with the desired number of degrees. This will automatically convert the degrees to radians and display the result in the cell. This function is useful for mathematical calculations involving angles in Google Sheets.

RADIANS

The RADIANS function converts an angle value in degrees to radians.

Sample Usage

`RADIANS(180)`

`RADIANS(6)`

`RADIANS(A2)`

Syntax

`RADIANS(angle)`

`angle` - The angle to convert from degrees to radians.

See Also

`TANH`: The TANH function returns the hyperbolic tangent of any real number.

`TAN`: The TAN function returns the tangent of an angle provided in radians.

`SINH`: The SINH function returns the hyperbolic sine of any real number.

`SIN`: The SIN function returns the sine of an angle provided in radians.

`PI`: The PI function returns the value of pi to 9 decimal places.

`DEGREES`: The DEGREES function converts an angle value in radians to degrees.

`COSH`: The COSH function returns the hyperbolic cosine of any real number.

`COS`: The COS function returns the cosine of an angle provided in radians.

`ATANH`: The ATANH function returns the inverse hyperbolic tangent of a number.

ATAN2: The ATAN2 function returns the angle between the x-axis and a line segment from the origin (0,0) to the specified coordinate pair (x , y), in radians.

ATAN: The ATAN function returns the inverse tangent of a value in radians.

ASINH: The ASINH function returns the inverse hyperbolic sine of a number.

ASIN: The ASIN function returns the inverse sine of a value in radians.

ACOSH: The ACOSH function returns the inverse hyperbolic cosine of a number.

ACOS: The ACOS function returns the inverse cosine of a value in radians.
