Google Sheets is a web-based spreadsheet program that allows users to create, edit, and collaborate on spreadsheets online. It offers a wide range of features and tools for organizing and analyzing data, making it a powerful tool for businesses, students, and individuals. With Google Sheets, users can easily input and manipulate data, create charts and graphs, and share their work with others for real-time collaboration. It is a user-friendly and efficient solution for managing data and information, making it a popular choice for individuals and organizations alike.

LEFT

Returns a substring from the beginning of a specified string.

Sample Usage

```
LEFT(A2,2)
```

```
LEFT("lorem ipsum")
```

Syntax

```
LEFT(string, )
```

`string` - The string from which the left portion will be returned.

`number_of_characters` - - The number of characters to return from the left side of `string`.

Notes

0 is a valid input for `number_of_characters` and will cause `LEFT` to return the empty string.

See Also

`SUBSTITUTE`: Replaces existing text with new text in a string.

`SPLIT`: Divides text around a specified character or string, and puts each fragment into a separate cell in the row.

`RIGHT`: Returns a substring from the end of a specified string.

`MID`: Returns a segment of a string.
