The GT function in Google Sheets is a powerful tool that allows users to compare two values and determine if the first value is greater than the second. To use this function, simply enter "GT" followed by an open parenthesis, then select the first value or cell reference, and add a comma. Next, select the second value or cell reference and close the parenthesis. The function will return a TRUE value if the first value is greater than the second, and a FALSE value if it is not. This function is particularly useful for data analysis and conditional formatting in spreadsheets.

GT

Returns `TRUE` if the first argument is strictly greater than the second, and `FALSE` otherwise. Equivalent to the `>` operator.

Sample Usage

```
GT(A2,A3)
```

```
GT(2,3)
```

Syntax

```
GT(value1, value2)
```

`value1` - The value to test as being greater than `value2`.

`value2` - The second value.

See Also

NE: Returns "TRUE" if two specified values are not equal and "FALSE" otherwise. Equivalent to the "<>" operator.

LTE: Returns `TRUE` if the first argument is less than or equal to the second, and `FALSE` otherwise. Equivalent to the `<=` operator.

LT: Returns `TRUE` if the first argument is strictly less than the second, and `FALSE` otherwise. Equivalent to the `<` operator.

GTE: Returns `TRUE` if the first argument is greater than or equal to the second, and `FALSE` otherwise. Equivalent to the `>=` operator.

EQ: Returns "TRUE" if two specified values are equal and "FALSE" otherwise. Equivalent to the "=" operator.
