RECOMMENDED CITATION

mohammad looti (2025). *Hindsight*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=30553>

Hindsight refers to the human tendency to look back at events that have already happened and make judgments about how things should have been handled. All of us have had the experience of looking back at an event where we acted impulsively, or with limited knowledge of the situation, and then later thought back and said to ourselves "I should have reacted differently" or "I should have said something different."
