RECOMMENDED CITATION

mohammad looti (2025). *Syncope*. PSYCHOLOGICAL SCALES. Retrieved from <https://scales.arabpsychology.com/?p=35752>

Medically, syncope refers to an abrupt fall in a person's blood pressure that may cause sudden unconsciousness and muscle weakness such as fainting. It is characterized by sudden onset, short duration losses/disruptions of consciousness followed by spontaneous recovery. It is frequently associated with low blood pressure. Grammatically, syncope refers to the linguistic habit of leaving syllables or sounds out of word such as pronouncing "probably" as "probably."
