one of three significant neural pathways inside the brain which utilize dopamine as their primary neurotransmitter. The cell bodies of this tract, that is a local circuit within the hypothalamus, project short axons toward the pituitary gland. The is related to controlling of hypothalamic operation and certain hormones. Modifications in hormone operation engaging this tract are frequently observed in patients taking phenothiazine antipsychotics.

TUBEROINFUNDIBULAR TRACT: "The tuberoinfundibular tract was nicked with a scalpel during the excision of the tumor."
